

DRAFT DUNE VEGETATION MANAGEMENT PLAN

ZONE 2

Filtered views will be provided between the height of 1.5 – 2.5m (the view window) by:

- Retaining tree and tall shrub foliage cover between 50% - 70%.
- Maintaining tree and tall shrub cover between 50% - 70% through on-going targeted seedling removal and pruning.

All low shrubs and groundcover will be retained.

Key management activities will include:

- Fell existing dead trees and shrubs (retain felled material - coarsely break up and spread to nourish soil).
- Remove young seedlings of tree and tall shrub species that are likely to result in an excess of 70% foliage cover only.
- Retain larger more mature trees and trees and shrubs adjacent to beach access ways or storm water outlets.
- Prune or fell selected trees (preferentially retaining more mature trees) and tall shrubs to maintain 50% - 70% foliage cover between a height of 1.5 – 2.5m.
- Maintain tree and tall shrub cover between 50% - 70% through ongoing pruning.
- Weed management.
