1. BUSHCARE GROUP GOALS

The Rennies Beach Bushcare group is focused on engaging the local community to care for the local coastal environment, prevent further degradation and improve local biodiversity of coastal reserves on and surrounding the Rennies Beach headland area.

2. BUSHCARE GROUP ACHEIVEMENTS TO DATE – (What successes has your Bushcare Group achieved in relation to your achieving the goals and actions in your current Bushcare Group Action Plan and what lessons or new skills/knowledge have you learnt from these achievements?)

Successes/Goals/Actions achieved to date	Lessons learnt
Fencing off and revegetation/regeneration of coastal vegetation that was degraded following vandalism.	Getting adequate support from Council and communicating group's aims and goals to the local community.
Traffic control to reduce impact of coastal vegetation.	Reducing impacts of people and vehicles on coastal vegetation.
Regeneration and weed control of 15,232 square metres of coastal dune and headland remnant vegetation.	Need to follow up initial regeneration works and communicate the surrounding property owners the negative impact from invasive garden plants and garden waste dumping on the surrounding bushland.
Revegetation of 2,400 square metres of remnant vegetation along Rennies Beach viewing areas and Parson St viewing areas.	Insure that you communicate with local residents as to what is going to be planted and where to reduce fears of losing existing ocean views.
