

## Shoalhaven Active Transport Strategy

including Pedestrian Accessibility & Mobility Plan Update and Bike Plan Update

for

Shoalhaven City Council

### Appendix D: Path Projects Review

## Paths Review

The tables below provide a summary of the outcomes of the Paths Review undertaken as part of the Strategy; projects are ranked in the tables from those with the highest score (**High Priority**) to lowest score (**Low Priority**) using the new Active Transport Scoring Criteria (**ATSC**). Generally, **High Priority** projects represent the top 10% of scores; **Medium Priority** projects represent the next 25% of scores; and **Low Priority** projects represent the lowest 65% of scores

The full list of path projects is also available on Council's PAMP webpage, which can be found here:

<https://www.shoalhaven.nsw.gov.au/Council/What-guides-us/Policies-and-strategies/Pedestrian-Access-and-Mobility-Plan#section-6>

The online Path Projects Ranking Spreadsheet provides further details (than the tables below) in regard to the scores attributed to all projects in accordance with the new ATSC developed as part of the Strategy. The Path Projects Ranking Spreadsheet will continue to be viewed as an evolving, operational document, to be kept as up to date as possible by Staff. This will include:

- Removing completed projects (or those proposed to be undertaken by third parties).
- Amending existing projects following more detailed investigations.
- Adding new project concepts in accordance with the ATSC.
- Revising project scores further to more information becoming available in regard to the specific ATSC.

It is important that the PAMP Maps and Path Projects Ranking Spreadsheet are kept as up to date as possible in this way, and always made available for community review. Keeping the PAMP Maps and Path Projects Ranking Spreadsheet up to date as operational documents will also reduce the need for continually reporting changes in the broader PAMP and Bike Plan to the full Council. Of course, Council will continue to consider and fund Shoalhaven wide priorities through its annual DPOP process, with the PAMP and Bike Plan remaining as up to date as possible to help inform those decisions (along with all other relevant consideration).

Notwithstanding, it is recommended that a more detailed review of the Strategy (including the PAMP and Bike Plan) be undertaken at least every 5 years to ensure the details remain current; the documents remain contemporary; and that we are undertaking appropriate monitoring of the success of the Strategy to continually improve our active transport infrastructure, and in turn maximising the potential for active trips.

Historically, several consultants and numerous staff have all managed the Path Projects Ranking Spreadsheet at various times as it has evolved over many years, which in itself can create some inconsistencies in the way scoring criteria are applied.

To ensure fairness and equity right across Shoalhaven, the development of the Strategy has included a completely independent re-prioritisation of path projects across Shoalhaven by arc traffic + transport, based objectively on the new ATSC alone. As such, the outcomes of the Paths Review as shown in the Path Projects Ranking Spreadsheet below are based solely on raw project scores against the ATSC.

Notwithstanding, and as indicated in the review of the ATSC (Section 10 of the Strategy), community groups have the opportunity to amend the ranking of projects within their own jurisdictions. This is essentially guiding Council in regard to the ranking of their own local priorities only (that is - if they aren't happy with the particular order of projects that have fallen out of the initial independent raw scoring using the new ATSC ). The simplest way to explain this: if a particular local community had 2 projects in their local area that scored (for example) 13 and 19, but the local community believes that the project that scored 13 should be their highest local priority, then these scores are effectively just swapped around, so that the position of those projects isn't changed city wide, just the order of delivery in that particular local community.

In this way, these adjustments don't affect overall city wide priorities, just local priorities. This is a separate process to those projects that have been awarded additional points for "community advocacy" where have been specifically identified as a community priority either historically, or as part of the recent community feedback. Given that the project rankings are live operational documents, this advocacy feedback can be provided by the community at any time, and adjustments are undertaken under the new ATSC accordingly.

Finally, it is noted that adjustments were made to the project rankings in response to the recent community feedback to specifically reflect current community priorities. More details of the feedback received during the Exhibition period is provided in **Appendix I: Exhibition Outcomes Report**.
