Executive Summary

This document covers sewerage developer charges for the following development areas served by Shoalhaven City Council (SCC):

Service Area	Areas Included
Kangaroo Valley	Kangaroo Valley
Berry	Berry
Bomaderry	Cambewarra, Bomaderry
Nowra	Nowra, Nth Nowra, Sth Nowra, West Nowra, Worrigee, Nowra Hill
Shoalhaven Heads	Shoalhaven Heads
Culburra	Culburra Beach, Greenwell Point, Orient Point
Callala	Callala Bay, Callala Beach, Currarong, Myola
Huskisson/Vincentia	Huskisson, Vincentia, Woollamia, Hyams Beach
St Georges Basin	Wrights Beach, Bream Beach, Erowal Bay, Old Erowal Bay, Sancturary Point, St Georges Basin, Basin View, Tomerong, Wandandian
Sussex Inlet	Sussex Inlet, Swanhaven, Cudmirrah, Berrara
Conjola	Berringer Lake, Bendalong, Manyana, Cunjurong Point, Fishermans Paradise, Lake Conjola, Conjola Park
Milton/Ulladulla	Milton, Ulladulla, Narawallee, Mollymook, Mollymook Beach, Kings Point, Burrill Lake, Dolphin Point, Lake Tabourie

This document has been prepared in accordance with the *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater* (December 2002) issued by the former Department of Land and Water Conservation (DLWC) pursuant to section 306 (3) of the *Water Management Act 2000* and Circular LWU 5 issued by the Director General of the Department of Energy, Utilities and Sustainability (DEUS) in October 2004. This document is to be registered with the DEUS.

The timing and expenditures for works serving the area covered by this document and the calculation of developer charges is given in Appendices B, C and D.

Levels of service to be provided to the service areas are summarised in Table 5 in Section 4.5.

After agglomeration there is one development servicing plan (DSP). The developer charges for the DSP covered by this document are shown in Table 1.

Table 1 – Proposed Developer Charges

DSP Area	DSP Name	Proposed Developer Charge (2005/06 $ per ET)
A	Shoalhaven Sewerage Service Area	$6,780

If Council were to phase in this developer charge over 5 years the following would apply as shown in Table 2.

Table 2 - Phasing-in of Developer Charges (2005/06 $)

DSP Area	Proposed Developer Charge (2005/06 $ per ET)					
	Current 2005	From 1/1/2006	From 1/7/2006	1/7/2007	1/7/2008	1/7/2009
Shoalhaven Sewerage Service Area	$2,010	$3,000	$4,000	$5,000	$6,000	$6,780

Council has throughout the City various Special Section 64 infrastructure contributions which directly relate to the recoupment of existing and proposed infrastructure. Therefore should Council phase in the Developer Charges as per Table 2 the following criteria will apply to those lands which exist within the current Special Section 64 project areas (Refer to Appendix E for area plans):

Table 3 – Criteria for Special Section 64 Infrastructure Contribution Areas

Function					Charge to be Applied
Phased in Developer Charge	<	(S64 + SS64's) x CPI	<	Full Developer Charge	(S64 + SS64's) x CPI
Phased in Developer Charge	>	(S64 + SS64's) x CPI	<	Full Developer Charge	Phased in Developer Charge
Phased in Developer Charge	<	(S64 + SS64's) x CPI	>	Full Developer Charge	Full Developer Charge

S64 : Section 64 Contribution
SS64 : Special Section 64 Contribution
CPI : Consumer Price Index
Phased in Developer Charge: Charge specified in Table 2, eg: From 1/1/2006, From 1/7/2006 and 1/7/2007.
Full Developer Charge: Charge specified in Table 2 for 1/7/2009

Developer charges relating to this DSP will be reviewed after a period of 5 to 6 years. A shorter review period is permitted if a major change in circumstances occurs. In the period between any reviews, developer charges will be adjusted annually on 1 July (in Council's Annual management Plan) on the basis of the movements in the CPI for Sydney, excluding the impact of GST.

The developer shall be responsible for the full cost of the design and construction of reticulation works within subdivisions and for other works where they are not shown in this Plan.

Further details relating to the assets and to these plans can be found in the Background Documents (Refer Section 6).

Contents

1 Introduction

Section 64 of the *Local Government Act 1993* enables a local government council to levy developer charges for water supply, sewerage and stormwater. This derives from a cross-reference in that Act to section 306 of the *Water Management Act 2000*.

A Development Servicing Plan (DSP) is a document which details the sewerage developer charges to be levied on development areas utilising a Council's sewerage infrastructure. This document contains one DSP which enumerates the sewerage developer charge for the areas served by Shoalhaven City Council (SCC).

This DSP has been prepared in accordance with the *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater* (December 2002) issued by the Minister for Land and Water Conservation (now Minister for Energy and Utilities), pursuant to section 306 (3) of the *Water Management Act 2000* and Circular LWU 5 issued by the Director General of the Department of Energy, Utilities and Sustainability (DEUS) in October 2004.

This DSP supersedes any other requirements related to sewerage developer charges for the areas covered by the DSP. This DSP takes precedence over any of Council's codes or policies where there are any inconsistencies relating to the determination of sewerage developer charges.

2 Administration

DSP Name	Shoalhaven Sewerage Service Area
DSP Area	The areas covered by this DSP are shown in the plans located in Appendix A.
DSP Boundaries	The basis for defining the DSP area boundary is the sewerage areas served by the Kangaroo Valley, Berry, Shoalhaven Heads, Culburra, Callala, Huskisson/Vincentia, St Georges Basin, Sussex Inlet, Conjola and Milton/Ulludulla, Nowra and Bomaderry STPs.
Payment of Developer Charges	The contribution/s will be assessed by Council's Shoalhaven Water Group and will be those applicable at the time of payment where an operational development consent and Development Application Notice have been issued.

3 The Developer Charges Process

3.1 Introduction

Developer charges are up-front charges levied to recover part of the infrastructure costs incurred in servicing new developments or additions/changes to existing developments. Developer charges serve two related functions:

- They provide a source of funding for infrastructure required for new urban development.
- They provide signals regarding the cost of urban development and thus encourage less costly forms and areas of development.

The Developer Charges calculation is based on the net present value (NPV) approach adopted by the Independent Pricing and Regulatory Tribunal (IPART) for the metropolitan water utilities. The fundamental principle of the NPV approach is that the investment in assets for serving a development area is fully recovered from the development. The investment is recovered through up-front charges (i.e. developer charges) and the present value (PV) of that part of annual bills received from the development in excess of operation, maintenance and administration (OMA) costs.

i.e. Developer Charge = Capital Charge (cost of providing the assets) – Reduction Amount (cost recovered through annual bills).

The Capital Charge and Reduction Amount are discussed further in the following sections. The developer charges process is described fully in the *Developer Charges Guidelines for Water Supply, Sewerage and Stormwater* (December 2002) and Circular LWU 5 issued by the Director General of the Department of Energy, Utilities and Sustainability (DEUS) in October 2004.

NSW local water utilities (LWUs) which propose to levy developer charges for water supply and/or sewerage need to prepare development servicing plans (DSPs). The DSP details the calculation of the developer charges and is required to be fair and transparent.
LWUs need to calculate and report developer charges in accordance with section 306 (3) of the *Water Management Act 2000* and the Developer Charges Guidelines, and to register their DSPs with DEUS. DEUS spreadsheets have been used in the calculation of these charges.

Developer charges relating to a particular DSP should be reviewed by the LWU after a period of 5 to 6 years. If the review indicates that the developer charges in the DSP remain valid, the DSP will apply for a further 5 to 6 years after the utility releases a public notice to this effect. However, if it is considered that a new DSP is warranted a new DSP shall be prepared, exhibited and registered.

If a major change occurs in the LWUs circumstances such as the need for significant capital works that had not been included in the DSP, the LWU may carry out a review in less than 5 years, subject to approval by DEUS.

3.2 The Capital Charge

Capital Charge = Capital Cost x Return on Investment (ROI) Factor

The capital cost includes the cost of providing, extending or augmenting assets required, or likely to be required, to provide services to a development area. The capital cost per equivalent tenement (ET) is the value of the relevant assets divided by the capacity of these assets (in ETs).

Typically, the capacity of an asset would not be fully utilised until some time after construction of the asset. The Return on Investment (ROI), also known as a holding charge, is based on the cost of early investment, and recovery of the cost over time. The

ROI factor is dependent on the period for take-up of the asset capacity, and the rate of return required for the asset.

The capital charge is calculated for each service area. Service areas can be:

- An area served by a separate sewage treatment works.
- Separate small towns or villages.
- A new development area of over 500 lots.

Where the capital charges for two or more service areas are within 30%, they are agglomerated into a single DSP. Circular LWU 5 allows local water utilities to further agglomerate their DSP areas, including agglomeration all the areas. Shoalhaven City Council elected to agglomerate all the sewerage areas into a single DSP.

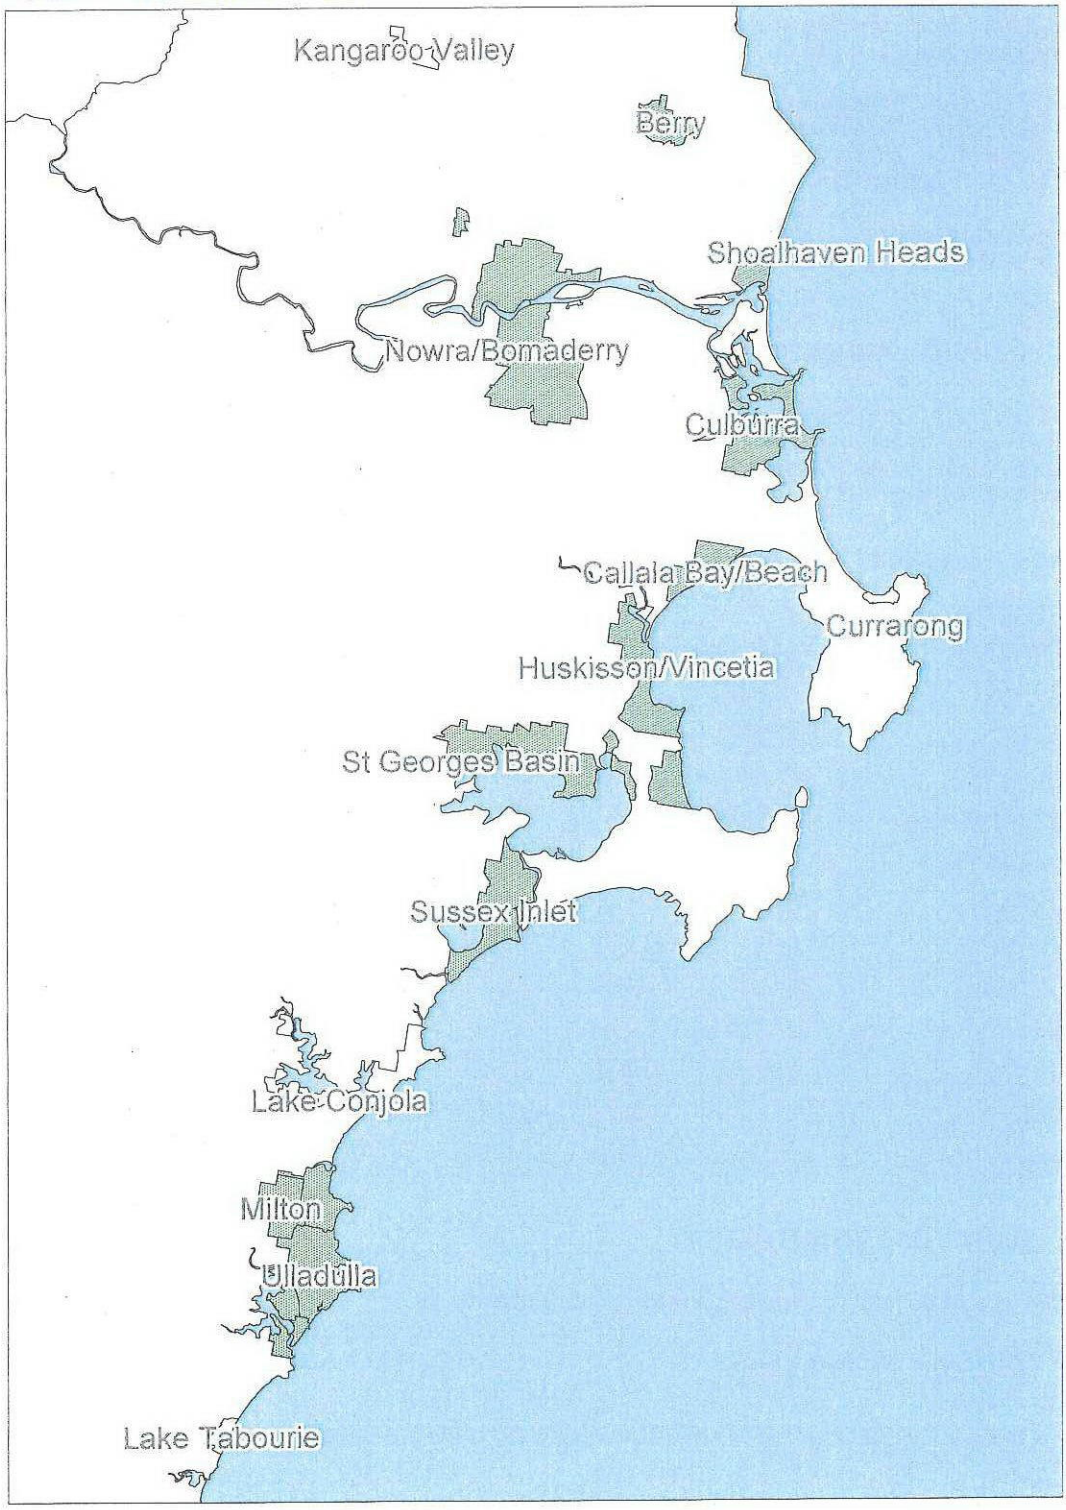
3.3 The Reduction Amount

SCC has adopted the NPV of Annual Charges method for calculation of the Reduction Amount. This method involves calculation of the present value (PV) of the difference between annual rates and charges revenue, and annual operating costs projected for new development over the next 30 years. This is divided by the PV of the new ETs over the planning horizon to give the reduction amount. The method involves 30 year forecasting of income and expenditures relating to new development.

4 Shoalhaven City Sewerage

The SCC sewerage area is shown on Figure 1.

Figure 1 – SCC Sewerage Area



4.1 Existing Sewerage Services

The Shoalhaven City Sewerage System currently consists of the urban catchments of Berry, Nowra, Bomaderry, Shoalhaven Heads, Culburra, Callala, Huskisson/Vincentia, St Georges Basin, Sussex Inlet, Milton/Ulladulla. All these catchments currently operate independently of one another. The new sewerage backlog areas of Kangaroo Valley, Tabourie Lake, Currarong and Conjola Region are being constructed over the next 5 years.

There are currently 10 sewage treatment works within Shoalhaven City, located at Berry, Nowra, Bomaderry, Shoalhaven Heads, Culburra, Callala, Huskisson/Vincentia, St Georges Basin, Sussex Inlet, Milton/Ulladulla. Current sewer augmentation projects will increase this to 12 treatment facilities with the addition of Conjola North and Conjola South.

Shoalhaven City sewerage currently incorporates 193 sewage pumping stations and 1026 kilometres of pipe. All sewerage assets within Shoalhaven City are owned and operated by SCC.

4.2 Growth Projections

Table 4 lists the proposed sewered areas and their populations as equivalent tenements (ET). Population projections are based on expected growth and include allowance for permanent residents, non-residential users and holiday loadings. These projections are from the present year to 2034, which is Council's planning horizon.

Table 4 – Projected ET of Sewered Areas

Service Area	2004	2009	2014	2024	2034
Kangaroo Valley	-	405	427	439	442
Berry	966	1,228	1,395	1,474	1,477
Bomaderry	4,583	4,871	5,369	7,675	9,105
Nowra	11,583	12,865	14,727	17,027	20,524
Huskisson/Vincentia	3,664	4,352	4,890	5,831	5,839
St Georges Basin	6,798	7,876	8,598	9,284	9,292
Sussex Inlet	4,323	4,594	4,861	5,120	5,380
Milton/Ulladulla	9,951	11,575	12,294	13,596	14,717
Shoalhaven Heads	2,435	2,570	2,800	3,062	3,306
Callala	2,155	3,338	3,771	3,776	3,782
Culburra	3,939	4,080	4,262	4,616	4,828
Conjola	-	3,150	3,692	3,975	3,982
Totals	50,396	60,902	67,086	75,876	82,676

4.3 Land Use Information

This DSP should be read in conjunction with Council's LEP.

4.4 Design Parameters

Investigation and design of sewerage system components is based on the following design manuals (as amended by Council):

- Manual of Practice: Sewer Design (1987).
- Manual of Practice: Sewage Pumping Station Design (1986).

- WSAA Sewerage Code of Australia (WSA02-2002).

4.5 Levels of Service

System design and operation are based on the following levels of service.

Table 5 – Levels of Service

Item	Description	Adopted Design Criteria	
Design Flow			
1	Average Dry Weather Flow (ADWF)	210 L/d/EP	
2	EP/ET	Coastal areas	3.2 [1]
		Inland areas	2.5 [2]
	Peak Wet Weather Flow (PWWF)	Berry Nowra/Bomaderry St Georges Basin Sussex Inlet Milton/Ulladulla Huskisson/Vincentia	1,020 – 1,520 Litres per day per EP
Pump Stations			
4	Design Flow	Capacity of duty and standby pumps able to deliver peak wet weather flow of upstream system/s based on flows only.	
Rising Main Design			
5	Design Flow	Capacity to be able to carry peak wet weather flow of pumping station at velocity of 2.5m/s Augmented rising mains to deliver to nearest 300mm or above gravity main where capacity exists, otherwise to nearest SPS where capacity exists, otherwise to TWKs.	
6	Pipe materials	DICL Cl 9, MPVC Cl 12, uPVC SII Cl 12	
Gravity System Design			
7	Maximum Anticipated Design Flow	All pipe sizing of gravity system extensions to be designed assuming a velocity of 1m/s with capacity exceeding maximum anticipated design flow.	
Emergency Storage			
8		Minimum 4hrs ADWF for inland areas (Berry and Nowra/Bomaderry) Minimum 8hrs ADWF for coastal areas	

1: Design occupancy in coastal areas is made of 2 permanent residents @ 1 EP per resident and 2 visitors @ 0.6 EP per visitor.
2: 2.5 was used for the following coastal areas: Saint Georges Basin and Milton/Ulladulla

4.6 System Capacity

SCC plans to augment its sewerage systems to cater for future growth. The system capacities are shown in the following table and are compared to existing and future populations (refer Section 4.2). System capacity is based on the following:

- Treatment works – design capacity (ET) with EP/ET conversion rate of 2.5 EP/ET for inland areas and 3.2 EP/ET for coastal areas unless noted otherwise.
- Transfer system – projected number of tenements in 2034 (refer Table 6)

The service areas used to calculate the developer charges are based on the future STP catchments.

Table 6 – Sewerage Systems Capacities

	Transfer System Capacity (ET)		Sewerage Treatment Plant Capacity (ET)	
Service Area	2004	2034	2004	2034
Kangaroo Valley	0	442	0	560
Berry	966	1,477	800	1,400
Bomaderry	4,583	9,105	5,000	8,200
Nowra	11,583	20,524	8,400	18,000
Huskisson/Vincentia	3,664	5,839	4,375	6,250
St Georges Basin	6,798	9,292	6,400	8,800
Sussex Inlet	4,323	5,380	2,500	5,625
Milton/Ulladulla	9,951	14,717	11,200	15,200
Shoalhaven Heads	2,435	3,306	1,250	3,125
Callala	2,155	3,782	1,875	3,750
Culburra	3,939	4,828	3,438	4,688
Conjola	0	3,982	0	3,438
Totals	50,397	82,674	45,238	79,035

Note: Figures extracted from Shoalhaven Water's "Headworks Capacity, Capability and Capital Works Calculations, 2005".

4.7 Capital Works

Capital works of $366 M (2005/06 $) will be required over the next 30 years to provide sewerage services to the city.

4.8 Timing of Works and Expenditure

The timing and expenditure for works serving SCC are shown in the capital works program, refer Appendix B.

5 Calculation of Developer Charges

5.1 Capital Charge

The capital charge was calculated separately for each of the service areas, based on the existing and future assets providing the services in those catchments. The capital charge for each area is calculated in Appendix C and summarised in Table 7.

Table 7 - Initial Capital Charges

Capital Charge Area	Capital Charge per ET (2005/06 $)
Conjola	$16,030
Kangaroo Valley	$13,997
Callala	$12,040
Berry	$9,699
Huskisson/Vincentia	$8,697
Culburra	$8,669
Sussex Inlet	$7,816
Shoalhaven Heads	$7,721
Bomaderry	$6,856
St Georges Basin	$6,404
Milton/Ulladulla	$6,338
Nowra	$5,605

5.2 Agglomeration of DSP Areas

The capital charges were then grouped into DSP areas of within 30% of the highest capital charge. The process of the agglomeration is shown in Table 8.

The weighted average capital charge is calculated on the proportion of growth in each DSP area shown in Table 8. The weighted average capital charge is used to calculate the reduction amount for the whole shire.

Table 8 - Agglomeration of Capital Charges

Area	Location	Capital Charge	DSP Area A	DSP Area B	DSP Area C	Prop'n of Growth %	DSP Capital Charge	Weighted Average Capital Charge
		2005$ per ET	% of highest	% of highest	% of highest			
A	Conjola	$16,030	100%			8%	$14,106	$1,211
	Kangaroo Valley	$13,997	87%			0%		$55
	Callala	$12,040	75%			7%		$844
B	Berry	$9,699	61%	100%		4%	$8,244	$432
	Huskisson/Vincentia	$8,697	54%	90%		10%		$832
	Culburra	$8,669	54%	89%		3%		$236
	Sussex Inlet	$7,816	49%	81%		5%		$387
	Shoalhaven Heads	$7,721	48%	80%		3%		$218
	Bomaderry	$6,856	43%	71%		6%		$415
C	St Georges Basin	$6,404	40%	66%	100%	15%	$6,012	$988
	Milton/Ulladulla	$6,338	40%	65%	99%	13%		$850
	Nowra	$5,605	35%	58%	88%	26%		$1,437
Weighted Average Capital Charge						100%		**$7,905**

Note: "Prop'n of Growth %" figures based on Table C14: Growth in Service Areas

The outcomes of the agglomeration process are:

- Conjola and Kangaroo Valley have similar charges and are grouped into DSP Area A.
- Callala and Berry have similar charges and are grouped into DSP Area B.
- Huskisson/ Vincentia, Culburra, Sussex Inlet, Shoalhaven Heads, St Georges Basin and Bomaderry and have similar charges and are grouped into DSP Area C.
- And Milton/Ulladulla and Nowra become DSP Area D.

5.3 Reduction Amount

Council has adopted the NPV of Annual Charges method to calculate the Reduction Amount. The Reduction Amount is calculated for the whole of SCC sewerage.

The reduction amount for SCC developer charges was calculated as **$1,125** per ET (refer Appendix D).

5.4 Developer Charges

The calculated developer charges for the DSP areas are shown in Table 9. These developer charges reflect the cost of assets for serving new development.

Table 9 - Developer Charges (2005/06 $)

DSP Area	DSP Name	Capital Charge	Reduction Amount	Developer Charge	% Growth
A	Conjola, Kangaroo Valley, Callala	$14,106	$1,125	$12,981	15%
B	Berry, Huskisson/Vincentia, Sussex Inlet, Shoalhaven Heads, Culburra, Bomaderry	$8,244	$1,125	$7,119	31%
C	St Georges Basin, Milton/Ulludulla, Nowra	$6,012	$1,125	$4,887	54%
Weighted Average Developer Charge				**$6,780**	100%

5.5 Reviewing/Updating of Calculated Developer Charges

As required by the guidelines (section 2.5), the developer charge relating to this DSP will be reviewed by SCC after a period of 5 to 6 years. If the review indicates that the developer charge in the DSP remains valid, this DSP will apply for a further 5 to 6 years after the Council releases a public notice to this effect. However, if it is considered that a new DSP is warranted, a new DSP shall be prepared, exhibited and registered.

If a major change occurs in the LWU's circumstances such as the need for significant capital works that had not been included in these DSPs, Council may carry out a review in less than 5 years, subject to approval by DEUS. If the review results in a new DSP, the new DSP will be exhibited and registered in accordance with the requirements of the guidelines.

In the period between any reviews, the developer charge will be adjusted on 1 July each year on the basis of movements in the CPI for Sydney, in the preceding 12 months to December, excluding the impact of GST.

5.6 Proposed Developer Charges

Council could agglomerate the developer charges for areas A, B, C and D into one DSP Area. These charges could be agglomerated on the basis of growth in Kangaroo Valley, Berry, Shoalhaven Heads, Culburra, Callala, Huskisson/Vincentia, St Georges Basin, Sussex Inlet, Conjola, Milton/Ulludulla and Nowra/Bomaderry with the resulting developer charge as shown in Table 10. No cross-subsidy will apply to existing customers.

Table 10 – Proposed Developer Charges (2005/06 $)

DSP Area	DSP Name	Calculated Developer Charge (2005/06 $ per ET)	Proposed Developer Charge (2005/06 $ per ET)
A	Conjola, Kangaroo Valley, Callala	$12,981	$6,780
	Berry, Huskisson/Vincentia, Sussex Inlet, Shoalhaven Heads, Culburra, Bomaderry	$7,119	$6,780
	St Georges Basin, Milton/Ulludulla, Nowra	$4,887	$6,780

If Council were to phase-in this developer charge over 5 years, the following would apply as shown in Table 11. These developer charges are in 2005/06 dollars and will need to be adjusted on 1 July each year on the basis of movements in the Construction CPI for Sydney, in the preceding 12 months to December, excluding the impact of GST.

Table 11 – Phasing-in of Proposed Developer Charges (2005/06 $)

DSP Area	Proposed Developer Charge (2005/06 $ per ET)					
	Current 2005	From 1/1/2006	From 1/7/2006	1/07/2007	1/07/2008	1/07/2009
Shoalhaven Sewerage Service Area	$2,010	$3,000	$4,000	$5,000	$6,000	$6,780

5.7 Reticulation Works

Developers are responsible for the full cost of the design and construction of sewerage reticulation works within developments including subdivisions. The design and construction of the works shall be in accordance with Council's development specifications for wastewater services.

5.8 "Out of Sequence" Development

This DSP has been based on growth prediction and where it will occur in the first of five years and beyond for a 30 year period. The Capital Works Plan has been developed to service this growth and has been reflected in the Financial Management Plan (adopted by the Council as the Annual Management Plan) that has ensured consistency and security in revenue and fees and charges (including developer charges). Development that occurs "out of sequence" (not aligned with the Annual Management Plan) can have significant impact on the financial plan therefore:

- For development within the first ten years of the DSP the developer can either delay the development or finance the works with repayment by Council as per agreement (between Council and the developer) and in accordance with the Development Servicing Plan and Annual Management Plan.
- Outside the first ten-years of the DSP the developer can either delay the development or finance the works without any repayment by Council.

In each case above, the developer financing will be by special agreement with Council.

5.9 Existing Approved Developments

Where development application have been determined and consent granted and the developer has paid the Section 64 Contribution prior to the implementation of this DSP and the development is required to construct infrastructure (which may be listed in the DSP) then the developer shall be required to construct the infrastructure at their full cost without refund.

5.10 Disclaimer

This DSP has been prepared with the best available information at the time of its preparation and any errors or omissions (if any) are unintended. The proposed growth as shown in this plan is indicative only.

Any assumptions or projections made by person/s using this document do so at their own discretion and risk.

6 Reference Documents

Background information and calculations relating to this DSP are contained in the following documents:

JWP (2005), 30 years Future Water Supply and Sewerage Infrastructure Plans

Shoalhaven City Council (2005), Population Projections for Urban Areas in the Shoalhaven

Shoalhaven City Council (2005), Headworks Capacity, Capability and Capital Works Calculations

7 Glossary

ADWF	Average Dry Weather Flow
AWWF	Average Wet Weather Flow
BOD	Biochemical oxygen demand. Used as a measure of the 'strength' of sewage.
Capital Cost	The Present Value (MEERA basis) of assets used to service the development.
Capital Charge	Capital cost of assets per ET x Return on Investment (ROI) Factor.
DEUS	Department of Energy, Utilities and Sustainability
Developer Charge	A charge levied on developers to recover all or part of the capital cost incurred in providing infrastructure to new development.
Discount Rate	The rate used to calculate the present value of money arising in the future.
DSP	Development Servicing Plan
DCP	Development Control Plan
DLWC	Former Department of Land and Water Conservation
EP	Equivalent Persons
ET	Equivalent Tenement
IPART	Independent Pricing and Regulatory Tribunal
kL/d	Kilolitres per day
LEP	Local Environmental Plan
LWU	Local Water Utility
MEERA	Modern Equivalent Engineering Replacement Asset
ML/d	Megalitres per day
NHMRC	National Health and Medical Research Council
NPV	Net Present Value
Post 1996 Asset	An Asset that was commissioned by a local water utility on or after 1 January 1996 or that is yet to be commissioned.
Pre-1996 Asset	An Asset that was commissioned by a local water utility before 1 January 1996.
PV	Present value. The value now of money, or ETs, in the future.
Real Terms	The value of a variable adjusted for inflation by a CPI adjustment.
Reduction Amount	The amount by which the capital charge is reduced to arrive at the developer charge. This amount reflects the capital contribution that will be paid by the occupier of a development as part of future annual charges.
ROI	Return on investment. Represents the income that is, or could be, generated by investing money.
SS	Suspended solids, or the concentration of particles in sewage. Used as a measure of the 'strength' of sewage.

PWWF	Peak Wet Weather Flow
SPS	Sewage Pumping Station
STP	Sewage Treatment Plant

Appendix A

DSP Areas

Sewerage Systems:
Berry
Bomaderry
Nowra
Shoalhaven Heads
Culburra
Callala
Huskisson/Vincentia
St Georges Basin
Sussex Inlet
Milton/Ulladulla

Backlog Sewerage Areas, to be constructed in next 5 years (not illustrated):
Kangaroo Valley (subject to assessment and funding)
Conjola region
Tabourie Lake
Currarong

The DSP areas contain all land currently zoned 2, 3 & 4 as defined under Councils LEP. The DSP also applies to approved developments in areas zoned 5 and 6.

Consisting of the following works:																		
Developer Servicing Plan																		
Northern Headworks																		
Southern Headworks + Distribution System																		
Northern Distribution Systems																		
REMS Stg 2 (Storage and Ocean Extension)																		
Total					**$37,668**					**$37,668**		82,522	**$456**					**$ 767**

Notes
1. Capital cost from Council's asset registers and MEERA cost for future works
2. Base year of capital cost varies depending on asset data. Assets constructed prior to 1970 are not included (except headworks)
3. Capital cost adjusted to 2005$ using CPI for Sydney (ABS)
4. Capital cost of future works discounted to 2005$
5. General works are of benefit to the entire Shoalhaven City area and have been apportioned to each Service area.

Table C4: Capital Charge Calculation
Shoalhaven City Council

Service Area	Nowra Sewerage	
Capital Charge	$5,605	per ET

Pre 1996 discount rate	3%
Post 1996 discount rate	7%
Transfer System Capacity (ET)	20,524
Treatment Plant Capacity (ET)	18,000

Asset	Catchment	sub type	Nom D	Line ID	Capital cost ($'000)[1]	Year dollars[2]	Capital Cost ($'000, 2005$)[3]	Year commiss-ioned	Effective year commiss-ioned	Present value 2004 ($'000)[4]	Capacity (ML or ML/d)	Capacity (ETs)	Capital cost ($/ET)	Year of full take-up	Years to full take-up	Discount Rate	ROI factor	Capital Charge ($/ET)
GENERAL WORKS [5]																		
Future Assets																		
Consisting of the following works:																		
Developer Servicing Plan																		
Northern Headworks																		
Southern Headworks + Distribution System																		
Northern Distribution Systems																		
REMS Stg 2 (Storage and Ocean Extension)																		
Total					$37,668					$37,668		82,522	$456					$ 757

Notes
1. Capital cost from Council's asset registers and MEERA cost for future works
2. Base year of capital cost varies depending on asset data. Assets constructed prior to 1970 are not included (except headworks)
3. Capital cost adjusted to 2005$ using CPI for Sydney (ABS)
4. Capital cost of future works discounted to 2005$
5. General works are of benefit to the entire Shoalhaven City area and have been apportioned to each Service area.

Table C5: Capital Charge Calculation
Shoalhaven City Council

Service Area	Shoalhaven Heads Sewerage	
Capital Charge	$7,721	per ET

Table C6: Capital Charge Calculation
Shoalhaven City Council

Service Area	Culburra Sewerage	
Capital Charge	$8,669	per ET

Pre 1996 discount rate	3%
Post 1996 discount rate	7%
Transfer System Capacity (ET)	4,828
Treatment Plant Capacity (ET)	4,688

Asset	Catch-ment	sub type	Nom D	Line ID	Capital cost ($'000)[1]	Year dollars[2]	Capital Cost ($'000, 2005$)[3]	Year commiss-ioned	Effective year commiss-ioned	Present value 2005 ($'000)[4]	Capacity (ML or ML/d)	Capacity (ETs)	Capital cost ($/ET)	Year of full take-up	Years to full take-up	Discount Rate	ROI factor	Capital Charge ($/ET)

Notes
1. Capital cost from Council's asset registers and MEERA cost for future works
2. Base year of capital cost varies depending on asset data. Assets constructed prior to 1970 are not included (except headworks)
3. Capital cost adjusted to 2005$ using CPI for Sydney (ABS)

Table C7: Capital Charge Calculation
Shoalhaven City Council

Service Area	Callala Sewerage	
Capital Charge	$12,040	per ET

Pre 1996 discount rate	3%
Post 1996 discount rate	7%
Transfer System Capacity (ET)	3,782
Treatment Plant Capacity (ET)	3,750

Future Assets																		
Consisting of the following works:																		
Developer Servicing Plan																		
Northern Headworks																		
Southern Headworks + Distribution System																		
Northern Distribution Systems																		
REMS Stg 2 (Storage and Ocean Extension)																		
Total					**$37,668**					**$37,668**		82,522	**$456**					**$767**

Notes
1. Capital cost from Council's asset registers and MEERA cost for future works
2. Base year of capital cost varies depending on asset data. Assets constructed prior to 1970 are not included (except headworks)
3. Capital cost adjusted to 2005$ using CPI for Sydney (ABS)
4. Capital cost of future works discounted to 2005$
5. General works are of benefit to the entire Shoalhaven City area and have been apportioned to each Service area.
6. Tomerong and Wandandian Backlog Capital Costs are less 65% for reticulation

Table C10: Capital Charge Calculation
Shoalhaven City Council

Service Area	Sussex Inlet Sewerage	
Capital Charge	$7,816	per ET

Pre 1996 discount rate	3%
Post 1996 discount rate	7%
Transfer System Capacity (ET)	5,380
Treatment Plant Capacity (ET)	5,625

Asset	Catchment	sub type	Nom D	Line ID	Capital cost ($'000)[1]	Year dollars[2]	Capital Cost ($'000, 2005$)[3]	Year commiss-ioned	Effective year commiss-ioned	Present value 2005 ($'000)[4]	Capacity (ML or ML/d)	Capacity (ETs)	Capital cost ($/ET)	Year of full take-up	Years to full take-up	Discount Rate	ROI factor	Capital Charge ($/ET)

GENERAL WORKS[5]																		
Future Assets																		
Consisting of the following works:																		
Developer Servicing Plan																		
Northern Headworks																		
Southern Headworks + Distribution System																		
Northern Distribution Systems																		
REMS Stg 2 (Storage and Ocean Extension)																		
Total					$37,668					$37,668		82,522	$456					$757

Notes
1. Capital cost from Council's asset registers and MEERA cost for future works
2. Base year of capital cost varies depending on asset data. Assets constructed prior to 1970 are not included (except headworks)
3. Capital cost adjusted to 2005$ using CPI for Sydney (ABS)
4. Capital cost of future works discounted to 2005$
5. General works are of benefit to the entire Shoalhaven City area and have been apportioned to each Service area.
6. Conjola backlog works, "CONJOLA REGIONAL (11000ep)", do not include any reticulation costs.

KANGAROO VALLEY (1400ep)					$1,980	2005	$1,980	2008	2008	$1,616			$2,886	2024	16	7%	1.58	$4,569
KANGAROO VALLEY (1400ep)					$176	2005	$176	2009	2009	$134			$239	2024	15	7%	1.54	$368
					55%	Percentage of capital costs for reticulation (this portion of cost has been removed)												
Total KV Backlog					$5,360					$4,590		560	$8,196					$13,240
GENERAL WORKS[5]																		
Future Assets																		
Consisting of the following works:																		
Developer Servicing Plan																		
Northern Headworks																		
Southern Headworks + Distribution System																		
Northern Distribution Systems																		
REMS Stg 2 (Storage and Ocean Extension)																		
Total					$37,668					$37,668		82,622	$456					$757

Notes
1. Capital cost from Council's asset registers and MEERA cost for future works
2. Base year of capital cost varies depending on asset data. Assets constructed prior to 1970 are not included (except headworks)
3. Capital cost adjusted to 2005$ using CPI for Sydney (ABS)
4. Capital cost of future works discounted to 2005$
5. General works are of benefit to the entire Shoalhaven City area and have been apportioned to each Service area.
6. Kangaroo Valley's Backlog Capital Costs have been reduced by 55% (to account for the reticulation component)

Table C16: Capital Charge Calculation
General Works - City Wide

Pre 1996 discount rate	3%
Post 1996 discount rate	7%

Asset	Capital cost ($'000)[1]	Year dollars[2]	Capital Cost ($'000, 2005$)[3]	Year commis-sioned	Effective year commis-sioned	Present value 2005 ($'000)[4]	Capacity (ML or ML/d)	Capacity (ETs)	Capital cost ($/ET)	Year of full take-up	Years to full take-up	Discount Rate	ROI factor	Capital Charge ($/ET)

Difference Greater Than 2%, Go to Next Iteration

General Notes:

1. Approximately three iterations of the financial planning model are normally required until the Ouput Reduction Amount for the first 5 years is within 2% of the Input Reduction Amount.

Specific Notes:

Table X - Calculation of Developer Charges using the NPV of Annual Charges Method — Shoalhaven Water - Sewerage

Based on Input Reduction Amounts of #### /ET (2nd iteration)

Difference Less Than 2%, Calculation Complete

Developer Charges for the first 5 years = $6780 in year 2005/06 dollars

General Notes:

1 Approximately three iterations of the financial planning model are normally required until the Ouput Reduction Amount for the first 5 years is within 2% of the Input Reduction Amount

Developer Chs	6,782	6,782	6,782	6,782	6,782	6,849	6,970	7,090	7,231	7,384	7,551	7,332	7,453	7,591	7,740	7,908	8,090	8,293	8,512	8,764

Table X - Calculation of Developer Charges using the NPV of Annual Charges Method — Shoalhaven Water - Sewerage

Based on Input Reduction Amounts of #### /ET (3rd iteration)

Difference Less Than 2%, Calculation Complete

Developer Charges for the first 5 years = $6780 per ET in year 2005/06 $

General Notes:

1 Approximately three iterations of the financial planning model are normally required until the Ouput Reduction Amount for the first 5 years is within 2% of the Input Reduction Amount

Table X - Calculation of Developer Charges using the NPV of Annual Charges Method **Shoalhaven Water - Sewerage**
Based on Input Reduction Amounts of $1,128 /ET (Fourth Iteration)

POPULATION PROJECTIONS FOR URBAN AREAS IN THE SHOALHAVEN

Census Applications
Planning Group Shoalhaven City Council
October 2004

TABLE OF CONTENTS

1. Purpose

Projections have been provided to Council by Census Applications for the purpose of preparing a s.65 Contribution Plan. Accordingly, they were required to cover the period 2004 to 2034.

Council specified in its requirements for the work that population projections were required and that these should be converted to dwelling requirements, including the dwelling type requirements of future populations.

This population-based approach has the substantial advantage that consideration is being given to the dwelling requirements of the likely future population. It contrasts with an approach which merely assumes current dwelling production levels will continue and that the resulting dwellings will be taken-up and eventually occupied.

2. Projection Method

Basis of the Dwelling projections then has been the population projections.

The population projections have been prepared using a so-called 'cohort component model' which estimates future population on the basis of three components:

- Numbers of people who are expected to survive in the area for the next 5 years;
- Children expected to be born in the area over the next 5 years;
- Net migration – the net result of inflows and outflows of people into the area.

Regarding survivors, the probability of death amongst men and women according to their age is available from the Australian Bureau of Statistics. Using this information, it is possible to estimate the number of people in each age group who may be expected to survive a further 5 years. For younger age groups this is clearly the vast majority o the population, but for those of 75 and more years of age, the probability of death over this same 5 year period rises substantially.

Survival rates for Shoalhaven City Council area were made available by Council (unpublished ABS data). This data compares very well with the more common approach of using State-wide averages when making population projections.

Council has also obtained local information from the Australian Bureau of Statistics on birth rates, ie, the number of children born to women in the area over the last few years according to age of the mother. This allows an estimate of the number of infants born to local women to be made each year of the projection period, based on the number of local women in each relevant age group.

Constant survival rates and birth rates have been assumed throughout the projection period. Now there has been a trend of increasing survival rates (people living longer)

and declining birth rates (fewer births per female) over the last 50 years, however the estimation of future rates was not seen as necessary for two reasons:

- Firstly, in outcome, increasing survival rates tend to balance declining birth rates; fewer births are balanced by fewer deaths each year. The result is a slightly older population than would otherwise occur, but population numbers are not greatly affected by the changes, compared with the uncertainties which apply to net migration.
- Over the last few years the rates of change for both survival and birth rates are slowing considerably, probably reflecting factors such as diminishing returns to improved health care.

Net migration is the end result of inflows and outflows of people to the area. The quantum is calculated between 1996 and 2001 using anticipated births plus anticipated deaths amongst the local population in each age group at 1996, to predict the 2001 population; the difference between the predicted population and the actual census count reflects net migration.

For most areas, net migration has been assumed constant throughout the projection period. This is a level of migration which can be anticipated with a high level of confidence based on past experience. However, net migration within Nowra Bomaderry has been adjusted to reflect the anticipated impact of the university sub-campus now established there, and continuing growth in numbers of people arriving from centres such as Sydney and Wollongong. Details of these adjustments are provided with the individual projections.

Once these three components of population growth have been established; viz survivors, births and net migration, they are added to the 2001 population to estimate the 2006 population by age group. This process is then repeated to estimate the population in subsequent years.

To produce the best possible projections, usual residents data has been used in the 2001 year except for Nowra/Bomaderry. This data has only recently become available for small areas and reflects where people responding to the Census indicated was their 'home' (usual residence). Hence, the projections estimate the number of usual residents in each required area according to age.

3. *Projecting Population*

This covers the broad principles behind the population projections. Probability based models such as Demograph[1] work best in large areas where there are sufficient numbers of people for average survival rates and average birth rates to provide a good indication of what is likely to happen in the future. Very small areas are greatly affected by local circumstances, for example, exceptional longevity in one family, or a family displaying low fertility.

[1] Probability of survival (survival rate), probability of birth of a child (birth rates)

The purpose of this project as a whole has allowed many of the smaller centres within the Shoalhaven to be grouped, as services are to be supplied to them from common infrastructure. This means that population numbers for projection have been able to be kept above 1,500, minimising (but not eliminating) the impact of local circumstances on the population outcome.

Nevertheless there have been circumstances where projections produced by the model are unlikely. The projections prepared for Manyana – Conjola have been replaced by ones based on dwelling production in the area over the last 4 years. However, as the notes to the Manyana – Conjola projection indicate even this alternative method did not yield results which are considered reliable; growth would be meteoric!

4. Dwelling Projections

Dwelling projections for each area are derived from the population projections.

Derivation method is to apply local occupancy rates (average number of people per dwelling) in the locality for which projections are being prepared to the projected population numbers. This produces an expected number of dwellings to be occupied by the projected population. Additional dwellings reflect the difference between the stock of dwellings at the beginning of each required projection period and the anticipated number of dwellings at the end of each period, eg, 2001 to 2006.

However, occupancy rates have been declining for many years and there is no reason to expect such declines to cease, although the rate of decline is certainly flowing in all cases observed. The result is that more dwellings are being required by the population each year than growth in the number of people from year to year would suggest.

Future occupancy rates have been estimated by applying curve fitting techniques, such as non-linear regression, to occupancy rates at the last 4 Census. This approach generates a declining predicted occupancy rate, albeit one declining at a steadily slowing rate. The fit between the curve and actual data was generally good or very good, although it is not certain that future rates will in fact follow those anticipated by curve fitting or any other predictive technique.

It is noticeable that many areas display similar occupancy rate decline curves, albeit with different localities being at different points on the curve. Nowra-Bomaderry, for example, is well down the curve, with a comparatively low occupancy rate in 2001 leading to the expectation of a very slow decline for the next 30 years.

In contrast, the Bay and Basin district currently has substantially higher occupancy rates, but those rates are declining in a similar fashion to Nowra-Bomaderry rates. Accordingly, rates in St Georges Basin are predicted to decline rapidly for the next few years. Occupancy rate graphs and predictions are provided in Appendix 1.

Another important factor for predicting future dwelling numbers in the Shoalhaven is the number of unoccupied dwellings there. Most of these unoccupied dwellings are believed to be used for 'holiday lettings' or as weekenders/retreats. Hence they are only used occasionally and conduct of the Census in early August (ie late winter) and out of school holidays is the time such dwellings are most likely to be vacant.

Within the dwelling projections, unoccupied dwellings are assumed to remain at the same proportion of total dwelling stock in each area as they were in 2001. This is a conservative assumption as their numbers have increased substantially in past years – nevertheless the 1996 to 2001 period was marked by small changes only in the number of unoccupied dwellings in a large majority of the Shoalhaven.

In summary, dwelling projections are mathematically linked to the population projections. Projected dwelling numbers do not change in a directly proportional manner to the population projections, however, as the former rely on slowly declining occupancy rates and preservation of vacant dwelling numbers at the proportion of stock they represented in August 2001.

5. *Dwelling Type Projections*

Consideration was given to projection of future dwelling numbers in each of the following categories:

- Detached dwellings
- Villas, town houses
- Flats and home units
- Other (includes not stated, caravans & similar, flat attached to shop)

As indicated in the preceding section, total dwelling numbers predicted for each area are essentially determined by numbers of people predicted to live in the area, predicted occupancy rates and predicted vacant dwelling numbers.

Within this constraint of total dwelling numbers, each dwelling type was factored to grow in numbers at a similar rate to growth in numbers of that dwelling type over the 1996 to 2001 period; growth in subsequent years is assumed to be at a rate proportional to growth in that dwelling type over the 1996-2001 period.

The outcome of this approach is that in almost all areas, medium density type housing, such as villas and flats, is growing considerably more quickly than detached dwellings. In a small number of areas such as Sussex Inlet, growth of medium density housing numbers has been so rapid – and from a very small base – that the rate has not been considered to be sustainable.

However, since 2000 the number of dwelling approvals for dwellings other than detached has declined. Therefore, these projections were considered to be unreliable and Council has reverted to a general allowance of 10% of all dwellings being other than detached. Some modification was made by area depending on zoning ie, medium density zone and where land supply would encourage higher density housing. This aspect will need to be monitored with the five yearly reviews.

6. Vacant Land Stocks

This is the last component of the projections. The model utilises vacant land stocks at March 2000 available from Council's comprehensive survey of that date, adjusts those stocks for activity between the survey date and the 2001 Census, then calculates the amount of land remaining according to two categories:

- Detached dwellings
- Other dwellings

The population projections and the demand for dwellings has been based on census years, ie, 2001 – 2006 etc to 2036. However, the baseline date for the plan is notionally July 2004 and extends to June 2034. This has required an adjustment to be made on a pro rata basis to bring the dwelling demand into line with the plan periods. Similarly, Council's last comprehensive land use survey was conducted in the year 2000. To adjust the land stocks data local area dwelling approvals have been used. In some cases, ie, Shoalhaven Heads 2004 surveys were carried out to supplement Council information.

The result of adjustment is an estimate of vacant land stocks at 30 June 2009. Additional dwelling requirements for the 2004-2009 period are then subtracted from the estimated vacant lot stocks figure, providing estimated vacant stocks at August 2009. A similar process is used in subsequent periods up to year 2034.

Dwelling demand in excess of anticipated land stocks has been identified in some urban areas but in most cases has been assumed to be capable of being satisfied by rezoning within the locality (shown as investigation areas). However, in a few cases where major constraints will prevent any rezoning the notional demand further growth has been curtailed.

7. Commercial, Industrial and other Non Residential

Commercial, industrial and other non residential (excluding caravan parks) have been assumed to grow at the following rates:

- For major growth areas of Nowra, Bomaderry and Ulladulla growth will be at the same rate as residential for the areas.
- For the unique tourist area of Berry growth will be at the same rate as residential.
- For all other areas mostly comprising coastal villages growth will be at 50% of the residential growth for these areas.

8. Reliability of the Projections and Estimates

While the age and sex projections have been prepared using a well recognised population projection method, there is no certainty that these projections will be met.

While the age and sex projections have been prepared using a well recognised population projection method, there is no certainty that these projections will be met. Equally, actual population growth may exceed the projections or in some cases be less than the projected growth.

The methods used to estimate other future population characteristics are ultimately based on characteristics of the current and past population. There can be no certainty that the future population will have those same characteristics. Factors such as an important new industry developing in the area may dramatically change the nature of demand for housing there, as may changes in the cost of housing.

As dwelling and land stock projections are derived from the population projections, the former should be treated as less reliable than the population projections themselves. This reflects the additional sources of error potentially affecting dwelling and land stock projections, such as unanticipated changes in occupancy rates, change in housing type preferences of the population or State regulation of dwelling type availability; each of these three sources of change are tenable within the projection period of 2006 to 2036.

Nevertheless, the projections are based on the best information available at present. Further, there are no defects apparent in the information available at present which suggest that corrections or adjustments should be made to improve the reliability of the projections and associated estimates.

9. *Transfer of Demand*

Past trends within Shoalhaven have included substantial growth in the coastal towns and villages.

Due to environmental constraints and pattern of land tenure it is envisaged that Nowra and Bomaderry will provide a far greater proportion of the total growth in the future. The opportunities have been included in a concept plan for the Nowra/Bomaderry area and more detail is to be provided in the *'soon to be released'* Structure Plan.

The State Government has identified the potential for Nowra/Bomaderry to play a role as a major regional centre on the fringe of the Greater Sydney Metropolitan area.

Overall there will be a growing trend towards urban consolidation with a greater emphasis on multi-unit and integrated development.

NOTE: The supply of land at Shoalhaven Heads is to all intent and purposes is exhausted.Continued significant development is dependent upon the granting of the aboriginal land claims and subsequent development of these areas for which there is little precedent for this so timing is unreliable.

Jun-04 Jun-09 Jun.-14 Jun-24 Jun-34

NOTE : If the Culburra expansion outside the Lake Wollumboola catchment is not developed a shortfall of 80 dwellings occurs in the 2009-2014 period and the supply is exhausted completely in the following period.In essence the land supply is to year 2013 without this land

NOTE: If the Culburra expansion area is developed at an earlier stage that would in turn affect the increase the demand as recent growth has been curtailed by the lack of land in Culburra

NOTE

The projections in this spreadsheet are based on a different method of projection than other areas That is dwelling approvals rather than population growth.The validity of this method cannot be maintained for a period longer than 10 years. It can be seen from the above table that that land supply is exhausted in this period except for new 5 Cunjurong Point Road .There are some questions over this land as it is State Land and may not be available for development.

Systems Development Engineer
Shoalhaven Water

INTRODUCTION

The Section 64 City Wide Development Servicing Plans (DSP) is required to be calculated in accordance with the Department of Energy, Utilities and Sustainability Guidelines. Included in the DSP's are Water Supply and Wastewater Headworks Capital Works comprising:

- Water Treatment Plants (WTP's)
- Trunk Water Mains and Reservoirs
- Wastewater Treatment Plants (WwTP's)
- Trunk Sewers, pumping stations and transfer pipelines

The Headworks Capital Works Plan is calculated from 2005/06 to 2034/35 and will be reviewed every five years with the review of the City Wide DSP.

1.0 WATER SUPPLY

1.1 Design

For Treatment Plants, Trunk Mains and Reservoirs the Design Standards is one day's peak demand.

1.2 Peak Day Demand

To determine a peak day demand the records were reviewed from the Bamarang Flatrock and Milton Water Treatment Plants for the peak day event during a series of hot days. Records indicate that peak demands were experienced in January 1994, December 1997 and November 2002 as shown in Table 1 below:

1994	Usage (ML/d)	1997	Usage (ML/d)	2002	Usage (ML/d)
1-Jan	90.98	16-Dec	70.77	2-Nov	85.14
2-Jan	87.21	17-Dec	73.15	3-Nov	76.50
3-Jan	82.77	18-Dec	82.91	4-Nov	81.03
4-Jan	82.84	19-Dec	64.73	5-Nov	79.03
5-Jan	77.92	20-Dec	69.87	6-Nov	73.45
6-Jan	88.03	21-Dec	68.23	7-Nov	70.24
7-Jan	92.90	22-Dec	75.29	8-Nov	82.11
8-Jan	102.91	23-Dec	81.05	9-Nov	76.42
9-Jan	95.76	24-Dec	77.06	10-Nov	75.72
10-Jan	87.61	25-Dec	51.39	11-Nov	75.68
11-Jan	70.51	26-Dec	63.73		
12-Jan	83.64	27-Dec	68.25		
13-Jan	82.86	28-Dec	68.71		
14-Jan	63.35	29-Dec	67.72		
15-Jan	65.21	30-Dec	93.31		
16-Jan	73.70	31-Dec	94.95		
17-Jan	59.80	1-Jan 98	79.47		
18-Jan	62.29	2-Jan-98	75.27		
19-Jan	55.57				
20-Jan	55.69				
21-Jan	57.10				
22-Jan	68.18				
23-Jan	69.68				
24-Jan	60.47				
25-Jan	73.78				
26-Jan	92.12				
27-Jan	70.19				
28-Jan	56.79				
29-Jan	76.66				
30-Jan	74.25				
31-Jan	67.27				

TABLE 1 –RECORDS OF PERIODS WITH HIGH/PEAK DEMANDS

The November 2002 peak was during Level 1 Water Restrictions and is therefore, discarded. Although some peak days were experienced over the Christmas/New Year peak holiday period 1st January 1994 (90.98Ml/d) and 31 December 1997 (94.95Ml/d) the peak day experienced in Shoalhaven was 8 January 1994 at 102.91ML/d.

Since 1994 the city has grown from a permanent population of 75,000 to around 92,000 people. Whilst the population has increased the peak day of 1993 has not been repeated, however, it is not to say that it could be in the future as population further increases. Therefore, a peak day demand of 103 Ml/d has been adopted.

This is consistent with the general community awareness of the need to reduce water consumption from vigorous Demand Management measures such as promotion, education, water efficient devices and water pricing.

1.3 Growth

In extrapolating the peak day demand into the future there will be variation of growth between residential and non-residential. Residential population growth has been determined by Shoalhaven Council's Planning Services Group and has also advised that the following non-residential growth should be used:

- Caravan Parks maintained at existing development (no growth),
- Growth of non-residential for Nowra/Bomaderry based on provided floor areas for commercial and land areas for industrial growth,
- Growth of non-residential for Saint Georges Basin and Ulladulla in proportion to 50% of residential growth
- Growth of non-residential for other areas in proportion to 25% of residential growth.

It is also assumed that large industrial customers, Manildra (5Ml/d peak) and Australian Paper (11 Ml/d) will maintain this current demand and no new large water users would be established.

1.4 Residential Peak Demand

The calculation of residential demand is determined by:

- Peak day demand 103 Ml/d
- Less Australian Paper 11 Ml/d
- Less Manildra 5 Ml/d
- Less Non-residential 14 Ml/d
- Peak residential 73 Ml/d

The 2004 total residential ET's is 42,495 hence the 2004 peak day demand is 1,718 litres/ET/day (73Ml/d ÷ 42,495 ET). For non-residential demand see Section 1.5.

Due to limited available peak day data and attenuation in storages with an approximate current 1.5 days peak demand capacity, a peak demand for residential properties is recommended at 2,000 l/ET/d. Note that this is 50% of the value adopted in traditional design using Public Works Design Standards where no consumption data is available.

1.5 Calculation of Non-Residential Peak Demand

Non-residential peak demand was calculated from meter readings over 2003/2004. Over this period meters were read either monthly, three monthly or annually as shown in Table 3 below. Monthly consumption figures were also used to determine the peak month.

WATER Non Residential 2003-2004		
TOTAL	3,659,227	kls per annum
MONTHLY A/C's	804,808	kls per annum

TABLE 2 – ANNUAL NON-RESIDENTIAL USAGE

The total non-residential usage was 3,659,227 kilolitres per annum or 10 Ml/d on average.

Monthly Accounts Consumption (kL) (Sept 03 to August 04)	
Sep-03	63,581
Oct-03	65,078
Nov-03	58,532
Dec-03	76,620
Jan-04	92,939
Feb-04	67,367
Mar-04	69,576
Apr-04	72,520
May-04	60,418
Jun-04	54,901
Jul-04	63,207
Aug-04	60,069
Total	**804,808**
Minimum	**54,901**
Maximum	**92,939**
Average	**67,067**

TABLE 3 – MONTHLY USAGE OF NON-RESIDENTIAL USERS

The ratio of average monthly to peak month consumption is:
= 92,939 ÷ 67,067 x 100 = 138.6% say 140%.

Therefore the peak non-residential day (2004) is assumed to be the ratio of the average non-residential day x 140%, or 14 Ml/day (10 Ml/d x 1.4).

The demand from meter reading was determined for each locality and placed under the serving reservoir zone as shown in Table 4, with caravan parks isolated from non-residential consumption.

1.6 Reservoirs

The existing reservoir and capacities are shown on Table 5 together with additional required storage capacities. Table 5 also notes water supply pumping station augmentation. This has been transferred to Table 6 – Shoalhaven Water Schemes – Proposed Water Supply Capital Works Program.

1.7 Treatment Plant Capacity

The treatment plant capacity for both North and Southern Shoalhaven is 113.5 Ml/d and will be upgraded to 143.5 Ml/d (Bamarang, 30 Ml/d upgrade) from 2010/11. Further augmentation to the Bamarang WTP to 173.5 Ml/d (30 Ml/d upgrade) from 2022/23 as shown on Table 6 – Shoalhaven Water Schemes – Proposed Water Supply Capital Works Program.

1.8 Proposed Capital Works

The growths for residential and non-residential have been converted to peak demands in the growth periods to year 2034 as shown in Table 5.

The demands from all residential, non-residential, caravan parks, farms and Manildra have been included for Treatment Plant and Reservoir capacity.

In addition to being provided with treated water, APM and Manildra are supplied with their raw water needs via a dedicated pipeline.

The determination of Capital Works cost is based on DEUS reference rates and as shown on Table 6. Note that costs (pipelines, pumping stations, reservoirs, etc) have been increased by 30% due to current contract values.

These costs, together with growth projections and proposed headworks have been used in developing the proposed capital works program as shown on Table 6 – Water Supply Capital Works Program.

2.0 WASTEWATER

Wastewater Headworks only applies to Treatment Plants. An assessment has been done on the residential and non-residential demand (June 2004) and for the future out to 2034. The current loading equivalent persons (EP) and future loading is shown on Table 9 for each of the 11 growth areas.

2.1 Calculation of Non-Residential Peak Demand

The non-residential peak demand was calculated from wastewater discharge accounts in the 11 areas as shown in Table 7. Caravan Park usage was deducted to determine the net non-residential loading.

This loading was then converted to EP using an EP loading factor. Different EP loadings were used for some WwTP's.

Sewerage Treatment Plant	EP loading (L/d/EP)	Annual Loading (kL/an)
Berry	240	87.60
Milton/Ulladulla	224	81.76
All Others	240	87.60

TABLE 7 – EQUIVALENT POPULATION LOADING FACTOR

2.2 Growth

The non-residential growth is based on the following:

Nowra/Bomaderry,

- Non-residential (commercial and industrial) areas, as prepared by Planning Department (floor areas and land areas), and
- Caravan Parks maintained as existing developments (no growth);

Saint Georges Basin and Milton/Ulladulla,

- Caravan Parks maintained as existing developments (no growth); and
- Growth of non-residential areas (where development type is unknown), in proportion to 50% of residential growth.

All other areas,

- Caravan Parks maintained as existing developments (no growth); and
- Growth of non-residential areas (where development type is unknown), in proportion to 25% of residential growth.

Large industrial customers, Manildra and Australia Paper are assumed to maintain their current independent wastewater and trade waste management.

The growth of residential and non-residential has been converted to equivalent persons in the growth periods to 2034 as shown on Table 9 – Proposed Wastewater Headworks.

2.3 Proposed Capital Works

The capacity at Treatment Plant has been assessed in relation to the loadings shown on Table 9. The determination of Capital Works cost is based on DEUS reference rates and as shown on Table 10. Note that costs (pipelines, treatment plants, pumping stations, etc) have been increased by 30% due to current contract values.

These costs, together with growth projections and proposed headworks have been used in developing the proposed capital works program as shown on Table 10 – Wastewater Capital Works Program.

TABLE 4

NON RESIDENTIAL WATER USE BY RESERVOIR ZONE

Zone	Localities	Percentage % within Zone	Annual Usage (kL/an)	Annual Usage per Zone (kL/an) : [CxD]	Farms(kL/an)	Caravan Parks (kL/an)	Annual NET Non Residential Usage per Zone (kL/an) : [E-F-G]	Gross Non-Residential Peak Day Demand (kL/d): [(E/365)x1.4]	Gross Non Res.
